CASE STUDY HOUSE NO. 22

4

is close to the edge of the cliff, and water and sky blend together when viewed from a low angle.

The interior only of the house contains 2,300 sq. ft. and the entire roof deck area is 4,000 sq. ft. The plan is L-shaped to better fit the outline of the site and still have room for a swimming pool. One wing of the house is the living area and the other contains the sleeping areas, with the juncture of the two containing the master bath, service porch, and adult dressing areas. A separate bathroom is provided for the children and a third bath is near the entry for the use of guests. The children's bedroom divides into two separate sleeping areas when desired and each child has a wash basin and wardrobe. A water closet and shower, both in compartments, divide the two dressing areas. The master bedroom joins the master bath by way of a large double wardrobe and dressing area. Instead of the usual shower compartment, an extra large sunken shower without a door is provided. Double basins and a Formica counter top plus a mirrored make-up table and a private water closet compartment complete the master bath.

The area from utility room to the end of the living room is completely open except for the kitchen cabinets and the fireplace that divides the living and dining areas. The fireplace is framed with 4" steel angles and is open on four sides above a raised stone fire-box. The flue and chimney is steel and the outside panels are gypsum board. The kitchen cabinets are a new pre-fabricated product that comes on the job with welded aluminum top and bottom frames and pre-cut wood panels that all fit together in a very short time. The two kitchen sinks are stainless steel and each has a disposal. The two ovens, range top, refrigerator, automatic washer and dryer are electric.

The steel frame is all welded as well as the steel sliding door frames and the steel roof
