

The L-shaped house, three bays wide and four bays long, was erected in one day with five men and a 180-degree stringer crane. Enclosed space is 2300 square feet; overhangs and carport account for the 4000 square feet of roofed area.

Twelve-inch 16.5-pound beams and 4-inch WF 13-pound columns are spaced 20 feet on centers to create 20- by 20-foot bays.

The pool and L-shaped house fill almost all of the buildable area. With pool set close to the edge of the cliff, water and sky blend together.
